

The graph shows the percentage change in the number of international students graduating in different Canadian Provinces between 2001 and 2006.

The first glance at the graph reveals that overall the percentage of international students graduating in 2006 increased compared to 2001. A more detailed analysis reveals that in Alberta the percentage actually dropped from around 6 to 4 percent. In 2006 Alberta actually scored worst from all provinces. In the same time British Columbia overtook almost all provinces challenging New Brunswick for number one spot. Data from Manitoba and Newfoundland & Labrador are identical. Both of them experienced a significant increase over specified period.

Clearly the trends were similar for all provinces however three provinces with the lowest percentage of students graduating in 2001 were the ones with the highest increases, matching the results of three best performing provinces from 2001.
